## NUCLEAR OPTION

BY SAAHASTARANSHU R. BHARDWAJ  
AND AMIT H. VARMA, PHD

◀ A typical SC wall.

### AN INCREASED INTEREST

As a result of the Fukushima Daiichi nuclear disaster, there has been a renewed interest in the design of safety-related nuclear facilities. This interest has led to the development of new design provisions and commentary for modular steel-plate composite walls for safety-related nuclear facilities. The design provisions and commentary are included in Appendix N9 of ANSI/AISC N690. The design provisions and commentary are also included in the 2012 Specification for Safety-Related Steel Structures for Nuclear Facilities (ANSI/AISC 690-12), a standard published by the American Institute of Steel Construction, Inc. (AISC).

**Saahastaranshu Bhardwaj** ([sbhardwa@purdue.edu](mailto:sbhardwa@purdue.edu)) is a PhD candidate at Purdue University's Lyles School of Civil Engineering and assisted Amit Varma with creating the steel-plate composite wall design provisions and commentary in Appendix N9 of ANSI/AISC N690. **Amit Varma** ([ahvarma@purdue.edu](mailto:ahvarma@purdue.edu)) is a professor at the Lyles School of Civil Engineering. He has served as the vice chair of AISC Task Committee 12: Nuclear Facilities Design and is currently a member of the AISC Committee of Specifications, AISC Task Committee 5: Composite Design and chair of the AISI/AISC Fire Committee.
